A Proven Leader for Stored Energy Solutions

Century Yuasa is New Zealand's leading battery supplier with a reputation for quality and innovation that has been refined and demonstrated over many decades.

In this time we have developed the engineering expertise and technical know-how to ensure we deliver a range of superior quality batteries better suited to New Zealand's diverse climate and tough conditions.

Today we pride ourselves in offering our customers a range of market leading products and services which continue to set new standards in technology and performance.

Our product range includes a comprehensive selection of technologically advanced products for use in a diverse range of applications including:

Idle Stop Start Vehicles

Truck, Bus & Heavy Equipment

Hybrid Vehicles

Deep Cycle

Car & Passenger Vehicles

Marine

SUV, 4x4 & Light Commercial

Lawn & Garden

A True Global Leader

Since its foundation in 1895, GS Yuasa has continually worked to create advanced stored energy solutions under the corporate vision of "innovation and growth". It is this philosophy that has seen GS Yuasa establish itself as the world's leading manufacturer of automotive and motorcycle batteries.

Our parent company GS Yuasa is one of the world's largest battery manufacturers and a global leader in quality and innovation.

Proven Performance

GS Yuasa are original equipment (OE) suppliers to the world's leading vehicle manufacturers.

As an affiliate of the GS Yuasa Corporation, Century Yuasa has access to some of the most advanced technical and R&D resources available in the battery industry. This gives you the assurance that every battery in our portfolio has been developed using state-of-the-art manufacturing processes and technical expertise to ensure we exceed the demands of tomorrow's car parc.

Why you can rely on Century Yuasa as your complete power solutions provider.

...

 <h3>Innovation and Technology</h3> <p>We invest significantly in research and development to ensure we continue to meet the needs of the market place and the next generation of vehicles.</p>	 <h3>Key Partnerships</h3> <p>A majority of leading Original Equipment Manufacturers (OEM) and New Zealand's biggest retail brands trust Century Yuasa for their energy solutions. We continually work with our partners to deliver on design, technology and quality.</p>
 <h3>Extensive Product Range</h3> <p>Our product range includes a comprehensive selection of technologically advanced products including starting, deep cycle, dual purpose and heavy duty batteries for use in a diverse range of applications.</p>	 <h3>Corporate Social Responsibility</h3> <p>We are committed to the environment and building a cleaner future, investing in a range of CSR & Sustainability initiatives focused on reducing our environmental footprint and benefiting New Zealand for future generations.</p>
 <h3>Nationwide Warranty</h3> <p>Our batteries are backed by a fully comprehensive warranty*. This provides peace of mind that your battery is covered against faulty materials or workmanship for up to 60 months*.</p>	 <h3>Nationwide Recycling Program</h3> <p>Our Century Yuasa Battery Recycling Program recycles more than 70,000 batteries nationwide each year.</p>

Providing sustainable energy solutions for today, tomorrow and the future.

*Conditions apply. Refer to individual warranty statements attached to each product.

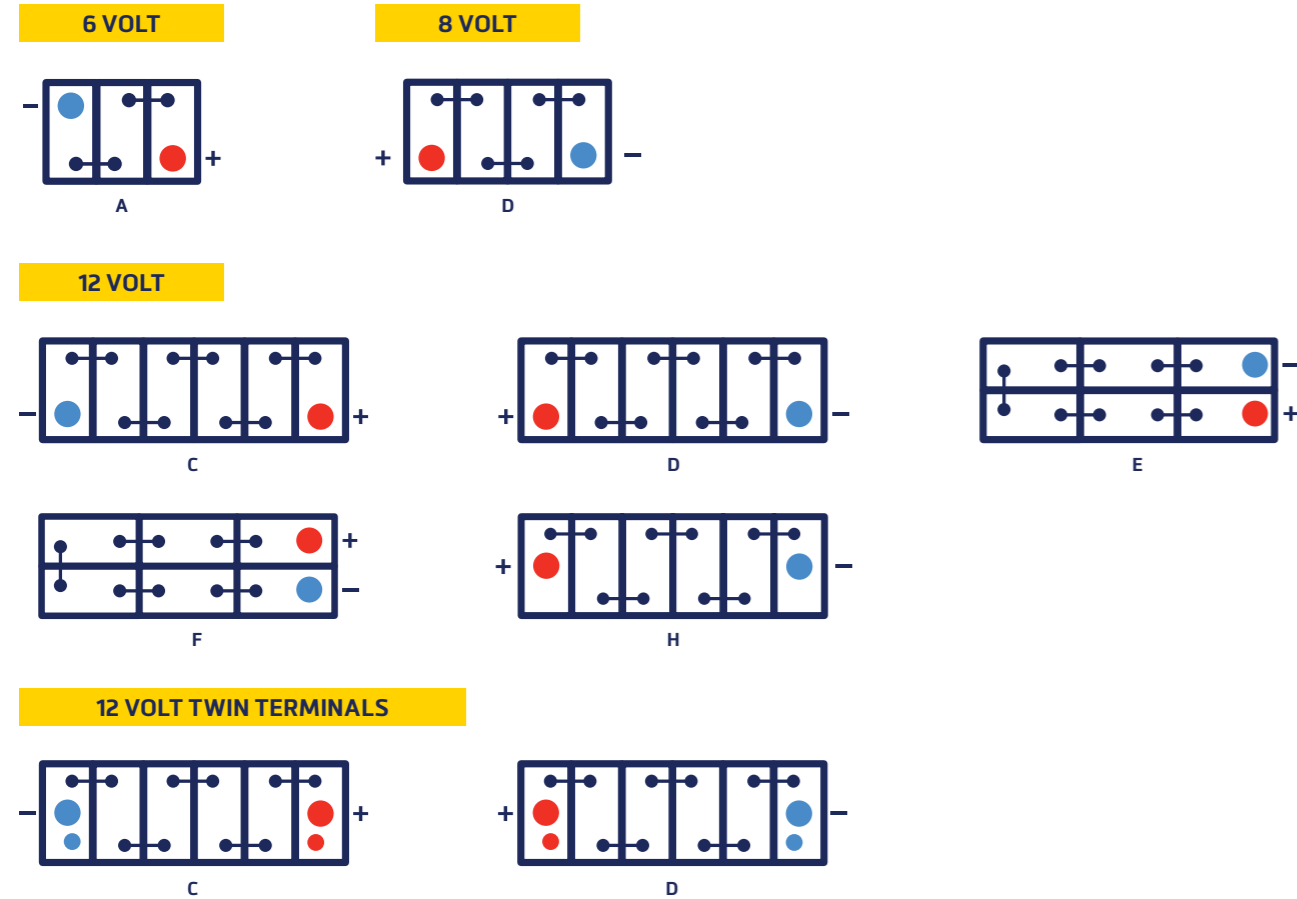

Our Network

Our national network of branches and distribution centres are strategically located across New Zealand ensuring access to locally held products and battery experts.

Australian Standard Specifications as per AS 2149.

Stop Start & Hybrid Range

ISS Active AGM

A range of premium batteries incorporating Absorbed Glass Mat (AGM) technology to deliver exceptional starting power, extreme cycle life and superior micro-cycling capabilities. ISS Active AGM batteries are designed and engineered specifically for vehicles fitted with advanced Stop Start engine management, regenerative braking and energy recovery systems.

ISS Active EFB

A range of original equipment (OE) Enhanced Flooded Batteries (EFB) which are used and endorsed by some of the world's leading car brands. The ISS Active EFB range is designed to help reduce fuel consumption and CO₂ emissions in vehicles fitted with Idle Stop Start systems.

ISS Active EFB Maintenance Free

A range of Enhanced Flooded Batteries (EFB) designed to aid the reduction of CO₂ emissions and fuel consumption in vehicles fitted with Idle Stop Start systems. They are also a suitable upgrade for standard vehicles that make regular short journeys due to superior recharge efficiency and micro cycling capabilities.

Hybrid Auxiliary

A range of original equipment (OE) Hybrid Auxiliary batteries endorsed by some of the world's leading car brands. Designed to provide superior cycling performance and dependable auxiliary power for hybrid vehicles and exceed the unique requirements of vehicles with auxiliary battery systems.

Idle Stop Start Systems vs Conventional Batteries

In vehicles fitted with Idle Stop Start systems, the battery must be able to handle the rigours associated with constant Idle Stop Start demands, rapid recharging and the power requirements needed to run electrical accessories whilst the engine is switched off.

The battery must also deliver the necessary cranking capacity to start the vehicle in a fraction of a second when the brake is released or the accelerator depressed.

Conventional batteries are not designed to handle the cycling requirements of Idle Stop Start systems. In a conventional system the battery operates in a high state of charge and starts the vehicle two or three times per day.

The capacity used to start the engine is replaced by the alternator throughout the duration of the journey. The battery is not subjected to constant cycling or required to operate in a partial state of charge.

Using a conventional battery in an Idle Stop Start system can affect the ISS and CO₂ emission controls in the vehicle and lead to premature battery failure.

Car & Passenger Vehicle

Ultra Hi Performance

Ultra Hi Performance batteries are designed and built to suit New Zealand conditions, providing the ultimate in battery performance. Suitable for both old and new vehicles with higher power demands, they are engineered to exceed leading vehicle manufacturer's standards for quality and performance, delivering exceptional starting power, maximum service life and extra power for vehicle electrics.

Deep Cycle

Lithium Pro

Lithium Pro batteries are designed to provide long lasting power in recreational deep cycle applications. Capable of delivering over 3000 cycles, 50% more usable energy and up to 10x faster recharging* they are suitable as a drop-in replacement for standard 12V Flooded, Gel or AGM Deep Cycle batteries#. The superior energy capacity, operating temperature range and lightweight design makes Century Lithium Pro batteries ideal for use in a range of applications where longer life, faster recharge and dependable power is required.

Deep Cycle Industrial

A range of multi-purpose, maintainable 6, 8 and 12 volt batteries designed for use in commercial and industrial machinery. They feature thicker, heavier battery plates, heavy duty internal connections, and a high density shock resistant construction for superior current flow and exceptional vibration resistance. Designed for strength and durability needed to provide tough, ultimate, long lasting power in recreational and industrial applications.

Deep Cycle

Deep Cycle REC

Developed by the world renowned GS Yuasa Corporation, REC batteries are a range of sealed maintenance free, VRLA batteries designed to deliver superior cycling performance in high rate discharge applications. REC batteries incorporate a unique electrolyte retention system, heavy duty lead acid calcium alloy grids and specialist raw materials for extra performance in both cyclic and float applications.

Dual Force+

Suitable for use in both starting and semi-cycling applications, Dual Force+ are a range of multi-purpose AGM batteries designed and built specifically for use in a diverse range of applications where dependable starting power and cycling power is a must.

Unlike many competitor's AGM products, the Dual Force+ range is manufactured using advanced AGM technology and specialist hard wearing Polypropylene cases which makes them ideal for use in under bonnet applications where heat, fluids and other contaminants can damage products not built to the same specifications.

Monitoring Equipment

The Century BM12V Battery Monitor is the easiest way to keep track of the battery's state of charge and the vehicles starting and charging systems.

The monitor helps prevent vehicle breakdown by transmitting real time battery data to the user's smartphone. Easy to set up push notifications will warn user about low battery voltage and record the battery's daily voltage levels to help identify potential issues.

191020	BM12V	12V Lead acid batteries (Flooded, AGM & Gel)	<ul style="list-style-type: none"> Bluetooth enabled App supports multiple monitors iOS and Android smartphones compatible Real time monitoring 31 Day logging Auto alert system

¹Based on 5 to 30% of battery Ah ratings. For optimum charging, 10% of battery Ah rating is recommended for flooded batteries and 20% of battery Ah rating is recommended for AGM & Gel batteries. [#]3V/8V activation on the CC61212, when 6/12V setting is selected.

Diagnostic Equipment

YU-FIT Battery Configurator

With the introduction of CO₂ production control systems such as smart charging and Idle Start Stop (ISS) it is essential that the vehicle has the correct battery type and specification installed.

An increasing number of automotive manufacturers have introduced systems that now require a replacement battery to be correctly configured to the vehicle after installation.

Failure to configure the correct specification battery could result in:

- Undercharging or overcharging of the battery resulting in damage which is not covered by the manufacturer's warranty
- Loss of the ISS CO₂ production control system functionality
- Possible loss of non-critical vehicle system functions

Battery configuration prevents incorrect battery charging, ensures the correct operation of the ISS CO₂ production control system and prevents the loss of non-critical vehicle systems.

The Century YU-FIT battery configurator tool allows the configuration process to be carried out on a growing number of vehicles equipped with new technology smart charge and ISS systems.

Battery Recycling

At Century Yuasa we are dedicated to caring for the environment and believe that scrap batteries should be recycled and disposed of responsibly. Our Used Lead Acid Battery (ULAB) program and commitment to environmental sustainability has seen Century Yuasa achieve SAI Global ISO14001 environmental accreditation, an international standard outlining the requirements for a structured approach to environmental protection and responsibility.

Why recycle?

98% of a lead acid battery can be reclaimed through recycling. The lead, plastic and acid components are re-processed and manufactured into an array of other products including guide posts, cabling and detergents.

1. SULFURIC ACID:

Sulfuric acid is converted to sodium sulfate to be used in the manufacture of glass, textiles, laundry detergents and fertilisers.

2. LEAD:

Battery plates, inter cell connectors and posts made from lead are melted down in a smelter furnace. The molten lead is then formed into ingots for re-use.

3. POLYPROPYLENE:

Battery containers and lids are chipped and sent for recycling into rubbish bins, plant pots etc.

Our recycling process

Benefits of recycling

- » Help build a cleaner New Zealand for future generations
- » Prevent harm to humans and wildlife
- » Protect the environment
- » Conserve natural resources
- » Reduce the amount of waste to landfill

Recycle your used battery now at one of our Century Yuasa registered Battery Recycling Centres around New Zealand or call 0800 93 93 93 to find your nearest Battery Recycling Centre.

9 6-Volt Battery.

Century Yuasa Nationwide Warranty

Each battery supplied by Century Yuasa comes with a warranty against defects for the period and application, as detailed on each battery.

If our testing determines the battery is defective we will replace it, however the costs of delivering it to the warranty location and collecting it and any replacement are yours. The claim must be made within the warranty period featured on the battery. Dated proof of purchase is required. The warranty period for replacement starts on the date of purchase of the defective battery it replaces. Call 0800 93 93 93 for advice and assistance regarding warranty claims. This warranty does not cover defects due to abuse, damage, neglect, sulphation, over or under charging, normal wear and tear or incorrect application, installation or maintenance.

This warranty is in addition to other rights and remedies available at law. Our goods come with guarantees that cannot be excluded under New Zealand's Consumer Law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

THIS WARRANTY DOES NOT COVER:

- ✗ A flat battery
- ✗ Normal wear and tear
- ✗ Physical damage
- ✗ Undercharging (sulphation)
- ✗ Incorrect application
- ✗ Negligence (before or during use)
- ✗ Overcharging
- ✗ Spillage from over filling
- ✗ Modifications to the battery
- ✗ Failure arising from the addition of fluids other than water
- ✗ Batteries used for motorsport or racing activities

Private Use Statement

Private use is a vehicle used for private needs, as opposed to business uses. These vehicles are generally defined as having only four wheels and are not used to carry passengers or goods for monetary purposes.

Warranty Periods Explained

- No warranty period applicable.

Battery Care & Maintenance[^]

...

Use the following as a guide when examining your batteries:

1. Check the battery's state of charge. Most batteries have a State of Charge Indicator on top of the battery that will give you an on the spot diagnosis of the battery condition. However, a more reliable way to check is with a voltmeter to determine the stabilised voltage or if the vent caps are removable a hydrometer to determine the specific gravity (SG) of the electrolyte. A charged Century battery will have a stabilised voltage above 12.5 volts and an SG reading above 1.240.

2. Ensure the battery top is clean, dry, free of dirt and grime. A dirty battery can discharge across the grime on top of the battery casing.

3. Inspect the terminals, screws, clamps and cables for breakage, damage or loose connections. These should be clean, tight and free of corrosion.

4. Apply a thin coating of high temperature grease to posts and cable connections for added protection.

5. Inspect the battery case for obvious signs of physical damage or warpage. This usually indicates the battery has been overheated or has been overcharged.

6. If you have a maintainable battery, it is important to check if the battery has sufficient electrolyte covering the battery plates. If topping up is required, do not over fill as the fluid levels will rise when the battery is fully charged and may overflow. Top up using distilled or demineralised water and never fill with sulphuric acid.

7. When servicing a sealed maintenance free (SMF) battery, check the State of Charge Indicator. This gives you a snap shot of the battery's condition and whether the battery needs to be charged or replaced. The vehicle may still start the engine although the indicator outlines to replace the battery. If the State of Charge Indicator advises 'Replace' it is important that the battery is replaced as the electrolyte levels may be below the plates which can lead to an internal explosion.

8. For batteries used in seasonal applications and stored long term, fully recharge the battery prior to storing. Check the state of charge or voltage regularly. Should the voltage drop below 12.5V, recharge the battery. It is important to check the battery completely before reconnecting to electrical devices.

[^]Always follow manufacturers guidelines.

Battery Health & Safety[#]

Battery Acid

Battery acid can cause burns. Suitable hand, eye and face protection and protective clothing must be worn.

First Aid

For advice, contact the poisons information centre (phone 0800 764 766 in New Zealand) or a doctor immediately. If in eyes, hold eyelids apart and flush the eye continuously with running water. Continue flushing until advised to stop by poisons information centre or doctor, or at least 15 minutes.

If skin or hair contact occurs, remove contaminated clothing and flush skin or hair with running water.

Acid Spill Response

Bund and neutralise spills with soda ash or other suitable alkali. Dispose of residue as chemical waste or as per local requirements.

If Electrolyte is Swallowed

Do NOT induce vomiting – give a glass of water. Seek immediate medical assistance.

Exploding Battery

Batteries generate explosive gases during vehicle operation and when charged separately. Flames, sparks, burning cigarettes or other ignition sources must be kept away at all times. Exercise caution when working with metallic tools or conductors to prevent short circuits and sparks.

Always Shield Eyes When Working Near Batteries

When charging batteries, work in a well-ventilated area – never in a closed room. Always turn battery charger or ignition off* before disconnecting a battery.

[#]As extracted and interpreted by product manufacturer from the Battery Council International Service Manual, Chapter 2, Thirteenth Edition. *In some vehicles, ignition may be required to be placed in accessory mode where electronic memory minder is present.
